Summary

Systems Engineer and Fullstack Developer with solid experience in designing and building scalable web ecosystems using .NET Core, Angular, and Laravel. My professional focus goes beyond coding; I specialize in Software Architecture, basing my developments on Clean Architecture and Layered Architecture (N-Tier) to guarantee robust and decoupled solutions.

I strictly prioritize Engineering Best Practices, applying SOLID Principles and design patterns like the Repository Pattern to ensure clean, testable, and easily maintainable code. I stand out for transforming complex requirements into efficient software, elevating the technical standard of the projects I participate in.

Experience

Mid/Senior Developer, Soft-G.Net – Barranquilla, Colombia

May 2023 – present

- End-to-End Development – Design and construction of new modules from scratch, covering everything from layout and logic in Angular to service architecture in .NET Framework/Core.
- Integration Architecture – Design and implementation of scalable architectures for external system integration, ensuring interoperability and efficient data flow.
- Code Quality (Frontend Lead) – Leading Code Reviews with a focus on Angular, establishing quality standards, performance metrics, and UI/UX best practices for the team.
- Incident Resolution – Advanced diagnosis and bug fixing (Fullstack), ensuring operational stability in production environments for both Frontend and Backend.
- DevOps & Deployment – Comprehensive management of application deployment and publishing on IIS servers, managing environment configurations.

Junior/Mid Developer, DevelopApp – Barranquilla, Colombia

Dec 2022 – May 2023

- Administrative Module Development – Implemented new functionalities and complete modules using Laravel on the backend and various technologies (Angular, Blade, VanillaJS) on the frontend, optimizing client workflows.
- Interactive Frontend – Designed dynamic graphical interfaces and manipulated the DOM using pure Vanilla JavaScript, improving interactivity without excessive reliance on libraries.
- Technological Versatility – Collaborated on the integration and maintenance of back-end services developed in Laravel, expanding the team's support capacity.

Junior Developer, Pastas Comarrico – Barranquilla, Colombia

Feb 2022 – Aug 2022

- Digital Transformation Leadership – Directed the strategic migration of legacy software (local) towards a modern web architecture, centralizing access to operational information.
- IoT & Real-Time Development – Built custom solutions integrating React and Node.js with technologies like Node-RED and WebSockets, enabling real-time process monitoring and control.
- UI/UX Modernization – Implemented a new responsive visual architecture using Bootstrap 5, standardizing the user experience across internal company tools.

Support Engineer, Indra – Barranquilla, Colombia

Aug 2021 – Jan 2022

- Mission Critical Support – Supported the billing process for energy sector clients (Aire/Afinia) through the precise execution of PL/SQL scripts in Oracle.
- SQL Conflict Resolution – Resolved critical database-level incidents, reducing OPENSEGC system downtime.

Education

Universidad de la Costa, CUC, Bachelor's Degree in Systems Engineering – Barranquilla, Colombia

Aug 2018 – Jun 2022

Universidad de la Costa, CUC, Diploma in IT Project Management in Systems Engineering – Barranquilla, Colombia

Feb 2018 – Jun 2022

Skills

Backend: .NET (Core v6+ & Framework v4.6), C#, Laravel (v5+), PHP, Entity Framework

Frontend: Angular (v2+), TypeScript, JavaScript (ES6+), Blade, Bootstrap (v3+), NGXS

Database: SQL Server, MySQL, Oracle PL/SQL, Query Optimization

CI/CD: Docker, Git, Jenkins, IIS, AWS (S3)
